Skills

Programming Language	| Kotlin, Dart, Typescript, Java, C#, Go
Mobile Development	| Android Native, Flutter, React Native
Backend Development	| Spring Boot, .NET, Go
Database	| PostgreSQL, MongoDB, Firebase
Tools	| Docker, Github, Github Action, Fastlane, Figma
Language	| Indonesia - Native, English - Upper Intermediate

Work Experiences

Flutter Developer
August 2025 - November 2025

1. *Prosa HI |* Developed Android apps using Flutter & Riverpod, this app helps women to get information about the pregnancy, track baby growth, and also mental health after the baby birth for the mother. In this app I am involved from the beginning with gathering information from the client, to develop the application using Flutter, then deploy the apps to Google Play Store. The longest process is not from the development, but comes from the deployment to Playstore, because a new account needs to pass from Closed Testing before we can continue to Production release.
Tech Stack | Flutter, Riverpod, Firebase (Crashlytics & Cloud Messaging)

Java Springboot Developer - RawLabs
March 2025 - November 2025

1. *BPD DIY Digital Apps |* Developed a web server using Java Springboot to handle Banking/FinTech-based apps, providing an all-in-one solution to corporate needs such as payroll, money transfers, purchasing daily necessities, etc. Worked extensively on the file-management-service that handles file uploads and downloads for reporting

cases, as well as bug fixes for other services.
Tech Stack | Java Springboot, Microservice, REST

Java Springboot Developer - Lamemba
April 2025 - August 2025

1. *Lexa v4.0 |* Contributing to the development of Lexa v4.0 using the Java Spring Boot framework with a microservice architecture, I work extensively on the setting-service that mostly handles CRUD operation for data that will be populated during form submission. Another one is file-service that handles uploading files to S3 compatible storage and saving the url to the database. The last service that I handled was payment-service where we use BNI service to generate the VA and make payment, and also handle the webhook where the payment was successfully paid.
Tech Stack | Java Springboot, Microservice, gRPC, External API

React Native Developer - PT. Central Proteina Prima Tbk
January 2025 - June 2025

1. *FitConnect |* Developed a mobile application that fetches data from Google Fit (Android) and Health Kit (iOS), and then periodically pushes the data to the server using background jobs.
Tech Stack | React Native, Expo, Context API, Firebase (Crashlytics), Google Fit API, Health Kit, Background Job, REST

Flutter Developer - PT. Bale Lab Indonesia
June 2023 - December 2024

1. *Falcon PRM |* Developed a mobile application to assist internal partners in their daily tasks, focusing on ease of use and efficiency. This app was built using Flutter & GetX, in this project I was involved from the beginning until finished and shipped to the client. The app itself is not uploaded to the playstore, because it will be used internally.
Tech Stack | Flutter, GetX, Hive, Background Job, Firebase (Crashlytics, Cloud Messaging), REST

2. *MyHalo Golf |* Delivered a mobile application for Telkomsel's Golf Tournament, designed for members and partners, enhancing their event experience. This app was built using Flutter & GetX, in this project i was involved from the beginning until it launched to playstore.
Tech Stack | Flutter, GetX, Firebase (Crashlytics, Cloud Messaging), Deep Link, REST

Flutter Developer - PT. Skyshi Digital Indonesia

November 2022 - December 2023

1. *GetHired |* Spearheaded the development of a mobile application enabling users to generate and download CVs with various pre-made templates, facilitating their job application process. This app was built using Flutter & GetX, in this project i was involved from the beginning until it launched to playstore.
   Tech Stack | Flutter, GetX, Firebase (Crashlytics, Cloud Messaging), REST

Flutter Developer - PT. Valbury Asia Futures

May 2022 - July 2022

1. *Valbury |* Joined Valbury as a Flutter Developer, contributing to the enhancement and optimization of their core financial and investment applications. Leveraging my expertise to deliver innovative and efficient solutions that improve user experience and streamline financial operations for their clients. This app was built using Flutter & GetX, and my day to day job was maintenance like updating the UI based on figma design, and also bug fix that has been reported by the QA team.
   Tech Stack | Flutter, GetX, Hive, Firebase (Crashlytics, Cloud Messaging, Dynamic Link), Deep Link, REST

Flutter Developer - PT. Ekrut Teknologi Pasifik

January 2022 - October 2022

1. *GaweYuk! |* Developed a job portal mobile application, helping users from various backgrounds find employment opportunities through an accessible and intuitive platform. This app was built using Flutter & GetX, and my day to day job was maintenance like updating the UI based on figma design, and also bug fix that has been reported by the QA team.
   Tech Stack | Flutter, GetX, Firebase (Crashlytics, Cloud Messaging, Dynamic Link), Deep Link, GraphQL

Mobile Developer - Dihardja Software Solutions

June 2019 - Present

1. *Skor.id |* Developed a comprehensive news portal app that also served as a dashboard for tournaments hosted by Skor.id, providing users with real-time updates and a

seamless experience.

Tech Stack | Flutter, GetX, Firebase (Crashlytics, Cloud Messaging, Dynamic Link), Deep Link, REST

2. *Altius* **|** Created a mobile application that facilitated employee performance management, allowing users to access and track their performance metrics on the go. This app was built using Flutter and GetX, and I was involved in this project from scratch until it launched to the playstore.

Tech Stack | Flutter, GetX, Hive, Firebase (Crashlytics, Cloud Messaging), REST

3. *Pet Lover Centre (PLC)* **|** PLC is a mobile app for Pet Lover Centre customers that is used for tracking their VIP activity, and also gains a lot of information related to the store, like promo, discount, etc. This app was built using Android Native Kotlin, and my job was continuosly maintenance and bug fix.

Tech Stack | Android Native, Kotlin, MVVM, Firebase (Crashlytics, Cloud Messaging), REST
